## **ENROLL US!**

Please use supplemental sheets for additional goals.

We Want to Be a Partner in EPA's National Partnership for Environmental Priorities

Name of Organization: Solectron	Facility Name: Solectron Puerto Rico Limited
Principal Contact: Abraham Rodriguez	Title: Functional Excellence Manager
Authorizing Official:	Title:
Address: POB 3919	City/State/Zip: Aguadilla, PR 00605
Phone/Fax: (939) 644-0858 / (787) 882-5760	Email: <u>abrahamrodriquez@solectron.com</u>
EPA RCRA ID Number: PRD987375094	Date: 1/24/06
PARTNER AGREEMENT	
	National Partnership for Environmental Priorities. Our goal is to reduce the
	in our products, processes, or releases using techniques such as source
	es. In this enrollment application, we identify one or more voluntary goals
	The voluntary goal(s) provided below is an initial estimate and may
	rom the program at any time. If/when we choose to revise our goals or
withdraw from the program, we will notify EPA.	
GOAL #1. Chemical Name: Lead	<b>CASRN:</b> 7439-92-1
	bly process uses the following materials to produce printed circuit boards:
	se out lead-bearing soldering materials and replace them with lead-free
materials we also plan to work with our suppliers to pha	se our lead-pearing components and poards with lead tinishes. Finally
	se out lead-bearing components and boards with lead finishes. Finally,
we plan to replace tooling, including solder iron tips, contribution	
we plan to replace tooling, including solder iron tips, control  How we will measure success:	aining lead finishes with lead-free substitutes.
we plan to replace tooling, including solder iron tips, contribution	aining lead finishes with lead-free substitutes.
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea	d in our materials before and after the project.
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary source reduction goal for Chemical #1 is	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline
we plan to replace tooling, including solder iron tips, controlled the we will measure success:  We will measure success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads and the success by comparing the amount of leads are success.	d in our materials before and after the project.
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary source reduction goal for Chemical #1 is	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 pounds in _October, 2004 (month/year _June, 2006 (month/year).	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to a reduced amount of 4,000 pounds generated/used by
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 pounds in _October, 2004 (month/year June, 2006 (month/year).  1b. To accomplish this goal, we will use the following source reduction goal for Chemical #1 is amount of _8,000 pounds in _October, 2004 (month/year).	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to a reduced amount of 4,000 pounds generated/used by  the reduction options (check all that apply):
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 pounds in _October, 2004 (month/year June, 2006 (month/year).  1b. To accomplish this goal, we will use the following source reduction goal for Chemical #1 is amount of _8,000 pounds in _October, 2004 (month/year).	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to a reduced amount of 4,000 pounds generated/used by  the reduction options (check all that apply):
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 _pounds in _October, 2004 _(month/year June, 2006 _(month/year).  1b. To accomplish this goal, we will use the following source _X _ Equipment or technology modifications.  Reformulation or redesign of products.	to reduce the amount of this chemical generated/used from a baseline to a reduced amount of _4,000_ pounds generated/used by  te reduction options (check all that apply):
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 _pounds in _October, 2004 _(month/year _June, 2006 _ (month/year).  1b. To accomplish this goal, we will use the following source _X _ Equipment or technology modifications.  Reformulation or redesign of products Improvements in inventory control.	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to a reduced amount of 4,000 pounds generated/used by  the reduction options (check all that apply):
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 _pounds in _October, 2004 _(month/year June, 2006 _(month/year).  1b. To accomplish this goal, we will use the following source _X _ Equipment or technology modifications.  Reformulation or redesign of products.	to reduce the amount of this chemical generated/used from a baseline to a reduced amount of 4,000 pounds generated/used by  te reduction options (check all that apply):  X Process or procedure modifications. X Substitution of less toxic raw materials.
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of _8,000 _pounds in _October, 2004 _ (month/year _June, 2006 _ (month/year).  1b. To accomplish this goal, we will use the following source _X _ Equipment or technology modifications.  Reformulation or redesign of products Improvements in inventory control Other (describe):	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to to a reduced amount of _4,000 _ pounds generated/used by  the reduction options (check all that apply):
we plan to replace tooling, including solder iron tips, conti- How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of 8,000 pounds in October, 2004 (month/year June, 2006 (month/year).  1b. To accomplish this goal, we will use the following source X Equipment or technology modifications.  Reformulation or redesign of products.  Improvements in inventory control.  Other (describe):  2a. In addition to, or in lieu of using source reduction methor	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to to a reduced amount of 4,000 pounds generated/used by  te reduction options (check all that apply):  X Process or procedure modifications. X Substitution of less toxic raw materials. Improvements in maintenance/housekeeping practices.  ds, our voluntary recycling or recovery goal for Chemical # 1 is to
we plan to replace tooling, including solder iron tips, control.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary <b>source reduction</b> goal for Chemical #1 is amount of 8,000 pounds in October, 2004 (month/year June, 2006 (month/year).  1b. To accomplish this goal, we will use the following source X Equipment or technology modifications.  Reformulation or redesign of products.  Improvements in inventory control.  Other (describe):  2a. In addition to, or in lieu of using source reduction metholincrease the recycled or recovered quantity of this chemical	d in our materials before and after the project.  to reduce the amount of this chemical generated/used from a baseline to to a reduced amount of
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a. Our voluntary source reduction goal for Chemical #1 is amount of _8,000 _pounds in _October, 2004 _ (month/year _June, 2006 _ (month/year).  1b. To accomplish this goal, we will use the following source _X _ Equipment or technology modifications.  Reformulation or redesign of products.  Improvements in inventory control.  Other (describe):  2a. In addition to, or in lieu of using source reduction method increase the recycled or recovered quantity of this chemical year) to an increased quantity of pounds by	to reduce the amount of this chemical generated/used from a baseline to a reduced amount of
we plan to replace tooling, including solder iron tips, cont.  How we will measure success:  We will measure success by comparing the amount of lea  1a.
